Introduction

NELA Ride's visual identity is built around warmth, trust, clarity, and community ownership. The design system should feel approachable and polished, with a civic and neighborhood-rooted character rather than a cold corporate one. Across the product, the brand should balance softness and structure: light surfaces, warm gold accents, simple typography, and restrained motion.

Brand Overview

NELA Ride is a community-centered transportation brand with a premium but accessible feel. The brand language leans on soft amber-gold tones, clean neutrals, and understated typography. It should feel local, thoughtful, and dependable. Wherever possible, the brand should communicate calm confidence rather than urgency or excess energy.

Design Principles

Design should feel community-first, calm, and reliable.

Interfaces should prioritize clarity over decoration.

Warmth should come from color, spacing, and tone.

UI should feel modern and clean.

Consistency is key.

Logo & Description

Main Logo

Use the underline-gradient logo for branded moments such as splash, welcome, or other high-visibility entry points.

Secondary Logo

Use white logo variants on dark backgrounds.
Use black logo variants on light backgrounds when a neutral treatment is preferred.

STYLING

The NELA Ride logo system includes standard, underline, black, white, and gradient versions. The underline-gradient logo is the most expressive branded mark and works especially well in hero, splash, and welcome contexts. The standard logo should be used when a cleaner or more neutral presentation is needed.

Proper Logo Use

Do not distort, stretch, rotate, crop, or recolor the logo outside approved variants. Do not place the logo on visually noisy backgrounds without sufficient contrast. Maintain generous clear space around the logo. When using a text-based NELA Ride lockup, keep "NELA" bold and "Ride" regular for brand consistency, such as shown at the top right of this page.

DO NOT change the color.

DO NOT crop the logo.

DO NOT rotate the logo.

Color Palette

The core palette is built around amber-gold and soft cream tones, supported by neutral grays and dark text.

Color Palette

The system colors are built around primary colors to denote status visually, light gray borders are used on white cards, with light/white backgrounds. Font colors should remain in high contrast with the background ie black on white, and vice versa.

Typography

The rider app uses a clean, modern visual style built around **Inter** typography. Main screens rely on bold, straightforward hierarchy with strong but not oversized titles, and readable body text. Overall, the approach to typography should communicate clarity and ease of access.

Iconography

Iconography should be consistent across the apps. The system should primarily rely on **ionicons** for app interfaces. Outline icons are preferred in most neutral interface states because they feel lighter and cleaner. Filled icons can be used when stronger emphasis is needed, but should not be mixed inconsistently within the same control group.

Prefer one icon family within a given screen or feature area. Use icon size consistently within similar rows or cards. Avoid decorative icon background circles unless they add clear functional value.

IONICONS

Sizing

Primary: 26px

Bottom Nav Inactive: 28px

Bottom Nav Active: 26px

Components

Cards

- Cards should use light surfaces with 1px borders (borders.color).
- Cards that need focus, creating hierarchy visually, shadows.sm can be used.

Buttons

- Background: button.brand.background
- Text: button.brand.text
- Border: button.brand.border (1px)

Layout & Spacing

12

The interface should never feel cramped or overfilled. Use consistent horizontal padding across screens. Vertical rhythm should be even and predictable. To create visual hierarchy a 10px space between header cards and page content is recommended.

Layout & Spacing

13

Between listed icons and any text that follows, using `spacing.lg` creates a large enough space to keep the icon from feeling crowded. This is consistent throughout the app.

spacing.lg

Summary

This brand system is designed to bring clarity, trust, and ease to every interaction. By applying consistent hierarchy, generous spacing, and cohesive component styling, we create experiences that are simple, accessible, and unmistakably **NELARIDE**.

Consistency

Use the system everywhere, every time.

Clear Hierarchy

Guide attention with purposeful typography and structure.

Generous Spacing

Let space create clarity, comfort, and balance.

Cohesive Components

Build with shared styles to deliver seamless, unified experiences.
